ADVENTURES IN DEMOCRATIC
DECISION MAKING

CONDORCET CONSISTENCY

Adrian Haret
a.haret@lmu.de

Around the same time as Borda,
another French intellectual was
making his voice heard...

**MARIE JEAN ANTOINE NICOLAS DE
CARITAT, MARQUIS OF CONDORCET**

1743 – 1794

Born into an ancient family.

MARIE JEAN ANTOINE NICOLAS DE CARITAT, MARQUIS OF CONDORCET

1743 – 1794

Born into an ancient family.

Showed an early ability for mathematics and ended up studying under d'Alembert.

MARIE JEAN ANTOINE NICOLAS DE CARITAT, MARQUIS OF CONDORCET

1743 – 1794

Born into an ancient family.

Showed an early ability for mathematics and ended up studying under d'Alembert.

After being appointed inspector general of the Paris mint, he shifted his focus to philosophy and political matters.

MARIE JEAN ANTOINE NICOLAS DE CARITAT, MARQUIS OF CONDORCET

1743 – 1794

Born into an ancient family.

Showed an early ability for mathematics and ended up studying under d'Alembert.

After being appointed inspector general of the Paris mint, he shifted his focus to philosophy and political matters.

The *Essay on the Application of Analysis to the Probability of Majority Decisions* features many now famous results in Social Choice.

Born into an ancient family.

Showed an early ability for mathematics and ended up studying under d'Alembert.

After being appointed inspector general of the Paris mint, he shifted his focus to philosophy and political matters.

The *Essay on the Application of Analysis to the Probability of Majority Decisions* features many now famous results in Social Choice.

Advocate of universal human rights.

MARIE JEAN ANTOINE NICOLAS DE CARITAT, MARQUIS OF CONDORCET

1743 – 1794

Born into an ancient family.

Showed an early ability for mathematics and ended up studying under d'Alembert.

After being appointed inspector general of the Paris mint, he shifted his focus to philosophy and political matters.

The *Essay on the Application of Analysis to the Probability of Majority Decisions* features many now famous results in Social Choice.

Advocate of universal human rights.

Fell afoul of the new revolutionary government and died in jail.

Recall that the Borda rule can choose a candidate whom a majority can deem unsuitable.

BORDA WINNER IS MAJORITY-DOMINATED BY ANOTHER CANDIDATE

Alternative b is the Borda winner.

But a majority prefers a to b .

THE MARQUIS DE CONDORCET
Ce n'est pas bon.

THE MARQUIS DE CONDORCET

Ce n'est pas bon.

The winner of an election shouldn't lose in a head-to-head contest with another alternative.

THE MARQUIS DE CONDORCET

Ce n'est pas bon.

The winner of an election shouldn't lose in a head-to-head contest with another alternative.

In fact, the winner should *win* all its head-to-head contests.

DEFINITION

A *Condorcet winner* is an alternative that wins in a head-to-head election with every other alternative.

WHAT'S THE CONDORCET WINNER?

a wins over *b*: 6 votes to 4.
a wins over *c*: 7 votes to 3.
a wins over *d*: 6 votes to 4.
a is the Condorcet winner!

	3	2	2	2	1	
<i>a</i>	<i>a</i>	<i>d</i>	<i>b</i>	<i>b</i>	<i>c</i>	PREFERENCES
<i>b</i>	<i>b</i>	<i>a</i>	<i>d</i>	<i>c</i>	<i>a</i>	
<i>c</i>	<i>c</i>	<i>c</i>	<i>a</i>	<i>a</i>	<i>d</i>	
<i>d</i>	<i>d</i>	<i>b</i>	<i>c</i>	<i>d</i>	<i>b</i>	

The Condorcet winner can be seen from the *majority graph*.

THE MAJORITY GRAPH

Draw an edge from x to y if a majority prefers x to y .

The Condorcet winner has only outgoing edges.

	3	2	2	2	1
PREFERENCES	a	d	b	b	c
	b	a	d	c	a
	c	c	a	a	d
	d	b	c	d	b

THE MARQUIS DE CONDORCET

Ok, we've solved it then.

Have people rank candidates and choose the Condorcet winner.

THE MARQUIS DE CONDORCET

Ok, we've solved it then.

Have people rank candidates and choose the Condorcet winner.

BORDA

There's one small problem with that...

THE CONDORCET WINNER MAY NOT EXIST!

1	1	1
<i>a</i>	<i>b</i>	<i>c</i>
<i>b</i>	<i>c</i>	<i>a</i>
<i>c</i>	<i>a</i>	<i>b</i>

PREFERENCES

THE CONDORCET WINNER MAY NOT EXIST!

A majority prefers a to b .

A majority prefers b to c .

A majority prefers c to a .

What to do?

1	1	1
a	b	c
b	c	a
c	a	b

PREFERENCES

Perhaps we could declare all the candidates in a majority cycle as tied winners?

RESOLVING CYCLES TO TIES DOESN'T WORK

There are two cycles: $a \rightarrow b \rightarrow c \rightarrow a$, and $b \rightarrow c \rightarrow d \rightarrow b$.

Resolving the first cycle makes a , b and c tied.

Resolving the second cycle makes b , c and d tied.

By transitivity, a should be d tied.

But a majority can prefer a to d !

MAJORITY GRAPH

RESOLVING CYCLES TO TIES DOESN'T WORK

There are two cycles: $a \rightarrow b \rightarrow c \rightarrow a$, and $b \rightarrow c \rightarrow d \rightarrow b$.

Resolving the first cycle makes a , b and c tied.

Resolving the second cycle makes b , c and d tied.

By transitivity, a should be d tied.

MAJORITY GRAPH

THE MARQUIS DE CONDORCET

Ok, but apart from the non-existence problem.

We should still select the Condorcet winner *when* it exists...

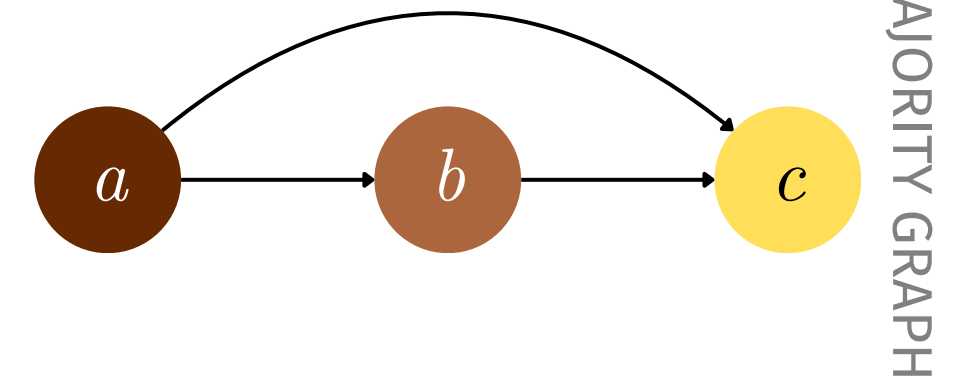

DEFINITION

A *Condorcet consistent* voting rule selects the Condorcet winner, if it exists.

THE BORDA RULE IS NOT CONDORCET CONSISTENT

Alternative b is the Borda winner.

But a is the Condorcet winner.

By the way, how badly can the Borda winner do with respect to the Condorcet rule?

As in, how many head-to-head contests can an alternative *lose* and still be the Borda winner?

By the way, how badly can the Borda winner do with respect to the Condorcet rule?

As in, how many head-to-head contests can an alternative *lose* and still be the Borda winner?

Interesting to think about for a project...

THE LLULL (COPELAND) RULE IS CONDORCET CONSISTENT (?)

Recall that Llull's (Copeland's) rule ranks alternatives according to the difference between the number of head-to-head wins and losses.

If a is the Condorcet winner, it wins all its head-to-head contests.

Llull (Copeland) score of a :

$$k - r$$

THE LLULL (COPELAND) RULE IS CONDORCET CONSISTENT

Recall that Llull's (Copeland's) rule ranks alternatives according to the difference between the number of head-to-head wins and losses.

If a is the Condorcet winner, it wins all its head-to-head contests.

So it also has the maximal Llull (Copeland) score.

And hence is the winner according to this rule.

Llull (Copeland) score of a :

$$k - r$$

What about tactical voting?

MANIPULATING A CONDORCET CONSISTENT RULE

Let's assume that majority cycles are broken lexicographically, i.e., a gets chosen before b , b before c .

b is the Condorcet winner.

4	4	2	TRUE PREFERENCES
a	b	c	
b	a	b	
c	c	a	

MANIPULATING A CONDORCET CONSISTENT RULE

Let's assume that majority cycles are broken lexicographically, i.e., a gets chosen before b , b before c .

b is the Condorcet winner.

Now the first group of voters can manipulate by burying c .

In doing so a cycle is created, which gets resolved in favor of a .

4	4	2	TRUE PREFERENCES
a	b	c	
b	a	b	
c	c	a	

4	4	2	STATED PREFERENCES
a	b	c	
c	a	b	
b	c	a	

There is, however, a way to circumvent this.

SPATIAL VOTING

Assume voters and alternatives are embedded in some type of space.

Think: ideological space.

Voters rank alternatives depending on how close they are.

Voter v thinks a is best, followed by b , followed by c .

This can be thought of as preferences having a specific type of *structure*.

DEFINITION

A profile is *single-peaked* if:

1. alternatives can be ordered linearly, e.g., from left to right, and
2. every voter has a most preferred alternative, with other alternatives less preferred the further away they are to the ideal.

\succ_1	\succ_2	\succ_3
<i>b</i>	<i>c</i>	<i>a</i>
<i>a</i>	<i>d</i>	<i>b</i>
<i>c</i>	<i>b</i>	<i>c</i>
<i>d</i>	<i>a</i>	<i>d</i>

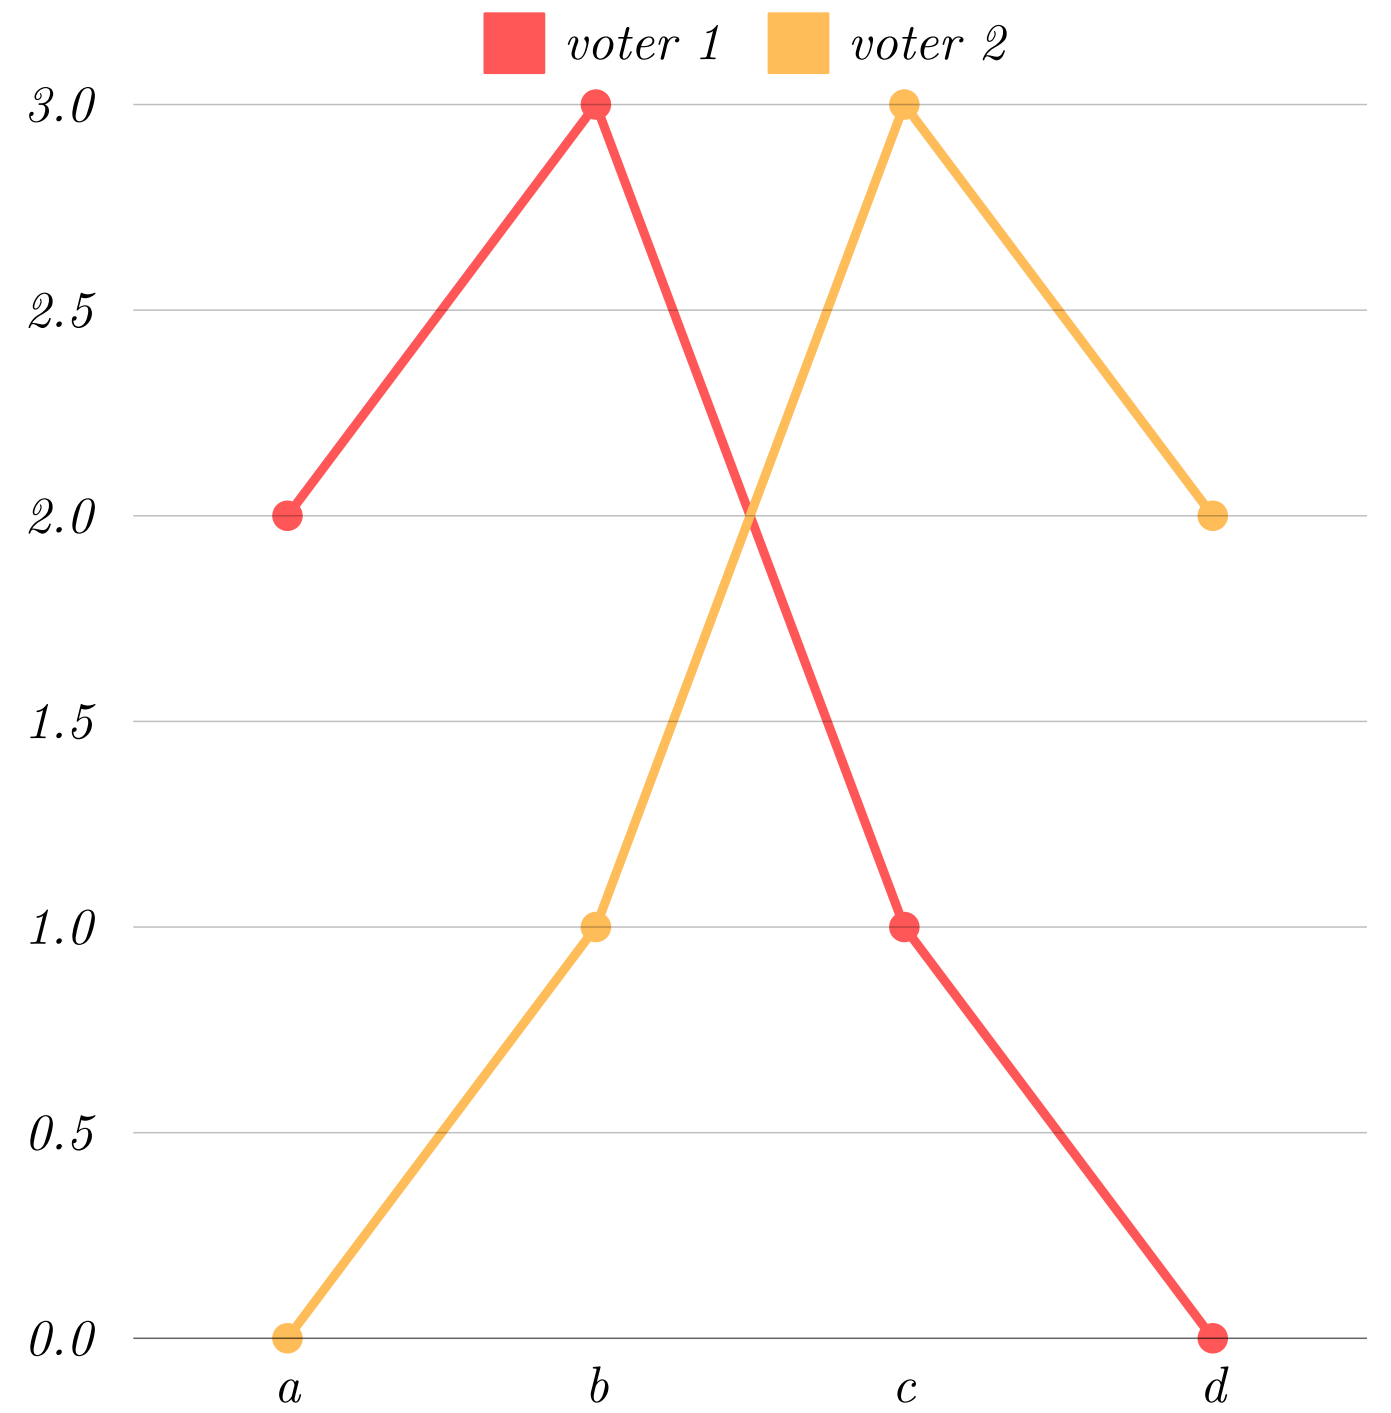

■ voter 1

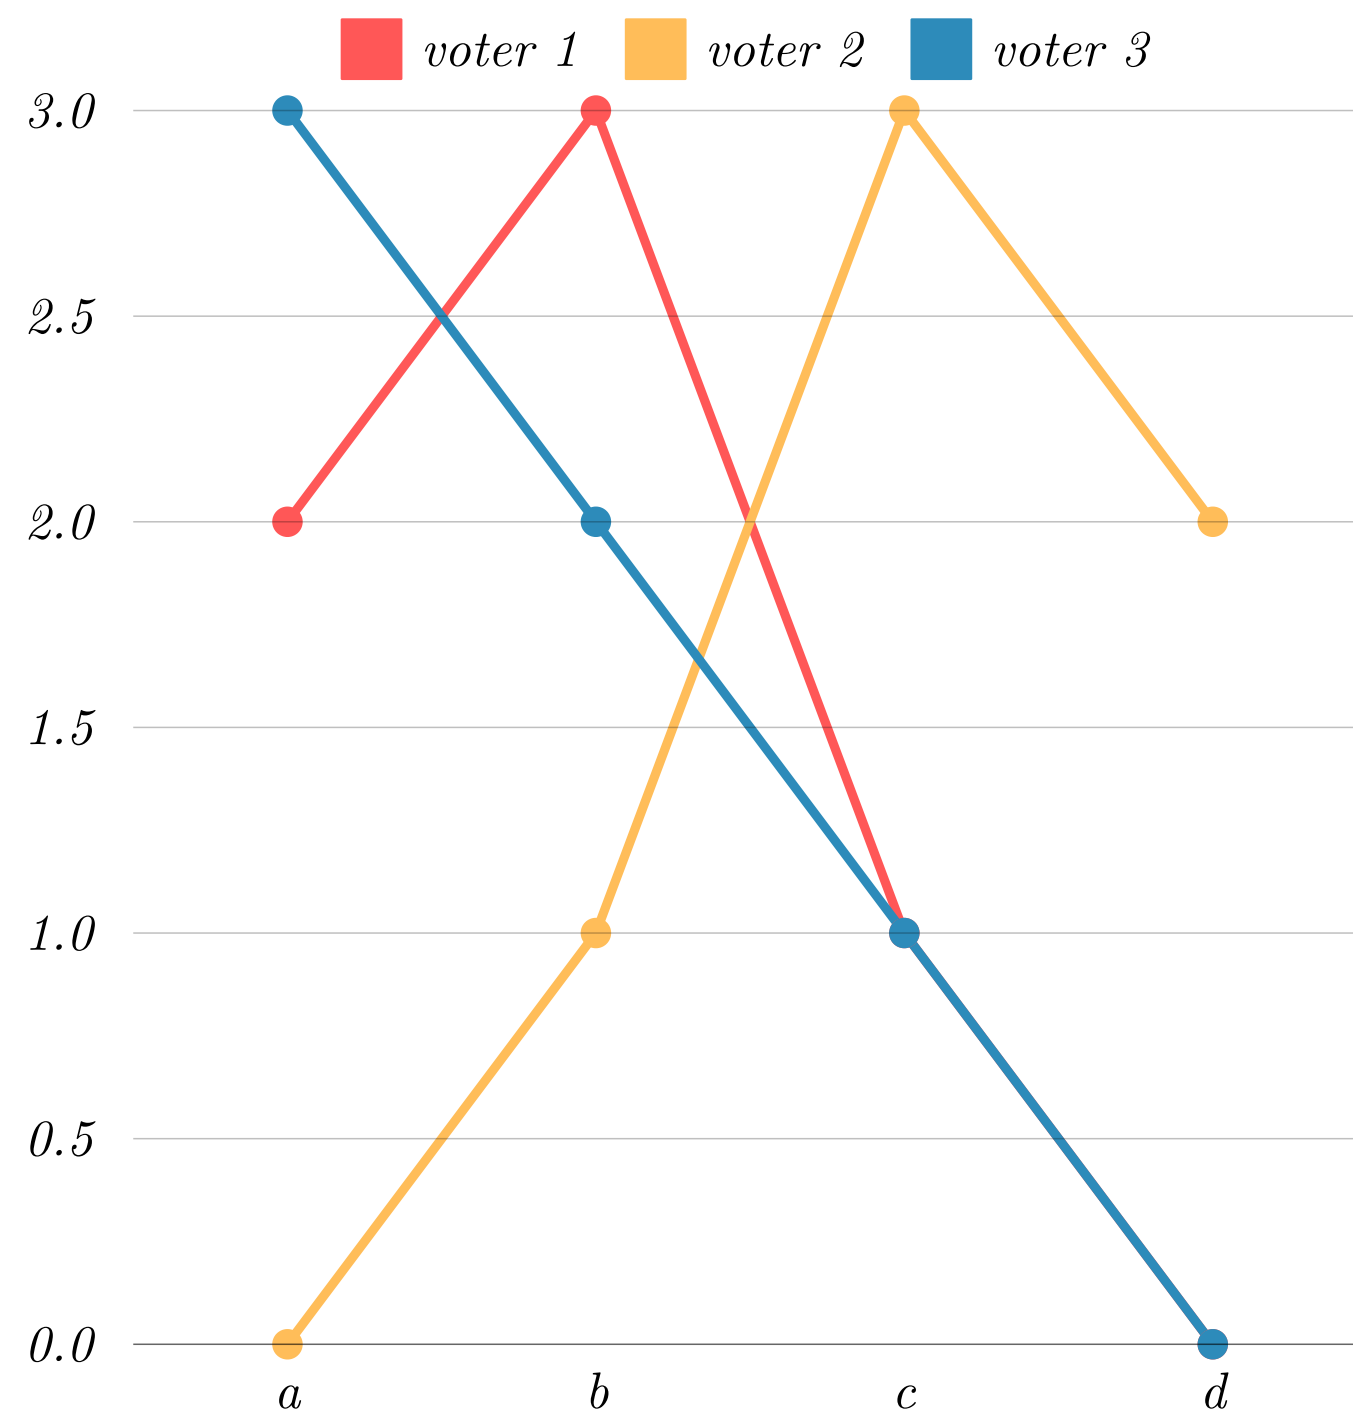

\succ_1	\succ_2	\succ_3
<i>b</i>	<i>c</i>	<i>a</i>
<i>a</i>	<i>d</i>	<i>b</i>
<i>c</i>	<i>b</i>	<i>c</i>
<i>d</i>	<i>a</i>	<i>d</i>

\succ_1	\succ_2	\succ_3
<i>b</i>	<i>c</i>	<i>a</i>
<i>a</i>	<i>d</i>	<i>b</i>
<i>c</i>	<i>b</i>	<i>c</i>
<i>d</i>	<i>a</i>	<i>d</i>

\succ_1	\succ_2	\succ_3
<i>b</i>	<i>c</i>	<i>a</i>
<i>a</i>	<i>d</i>	<i>b</i>
<i>c</i>	<i>b</i>	<i>c</i>
<i>d</i>	<i>a</i>	<i>d</i>

- \succ_4
- a*
- c*
- b*
- d*

NOT SINGLE-PEAKED

MEDIAN VOTER THEOREM

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then the median peak is a Condorcet winner.

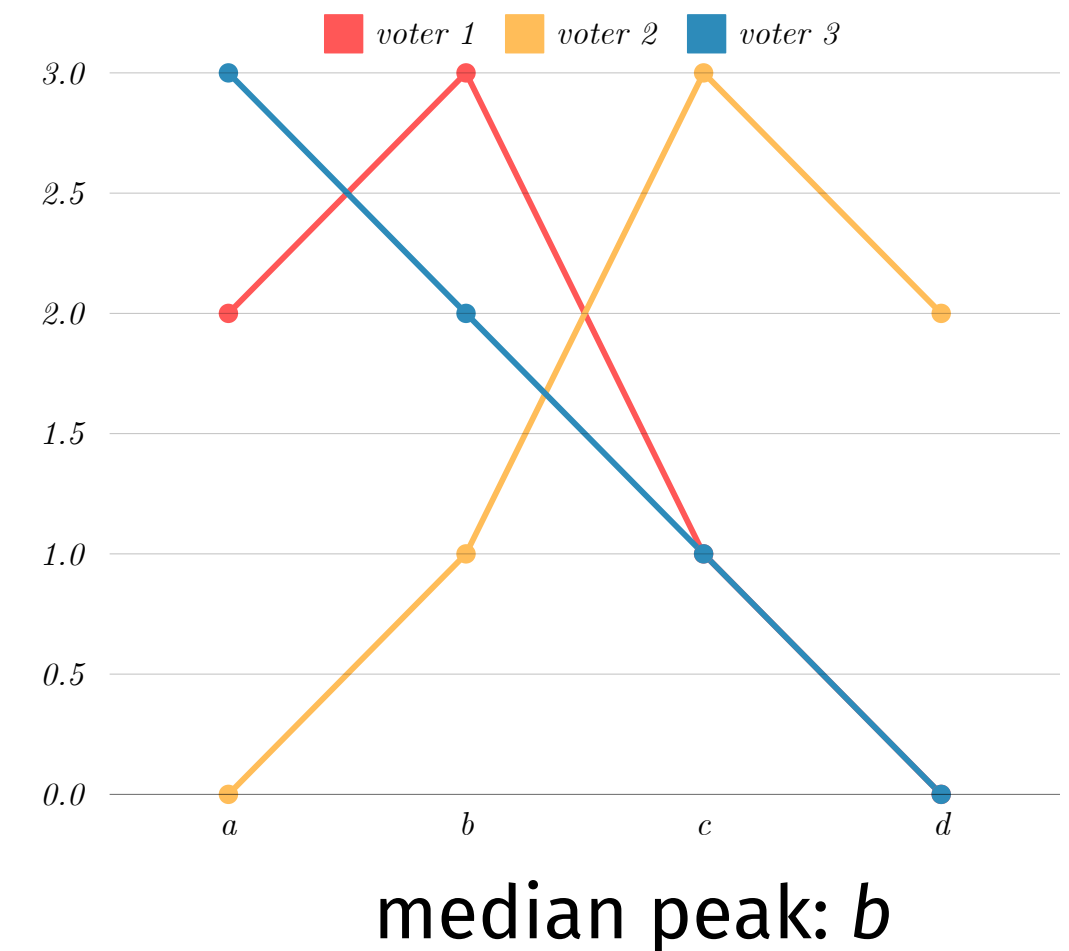

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

MEDIAN VOTER THEOREM

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then the median peak is a Condorcet winner.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

MEDIAN VOTER THEOREM

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then the median peak is a Condorcet winner.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

PROOF

If alternative x is the median peak, all voters whose peak is to the right of, and including, x rank x higher than alternatives to its left. And there is a strict majority of such voters.

MEDIAN VOTER THEOREM

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then the median peak is a Condorcet winner.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

PROOF

If alternative x is the median peak, all voters whose peak is to the right of, and including, x rank x higher than alternatives to its left. And there is a strict majority of such voters.

Similarly, voters whose peak is the left of, and including, x rank x higher than alternatives to its left.

MEDIAN VOTER THEOREM

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then the median peak is a Condorcet winner.

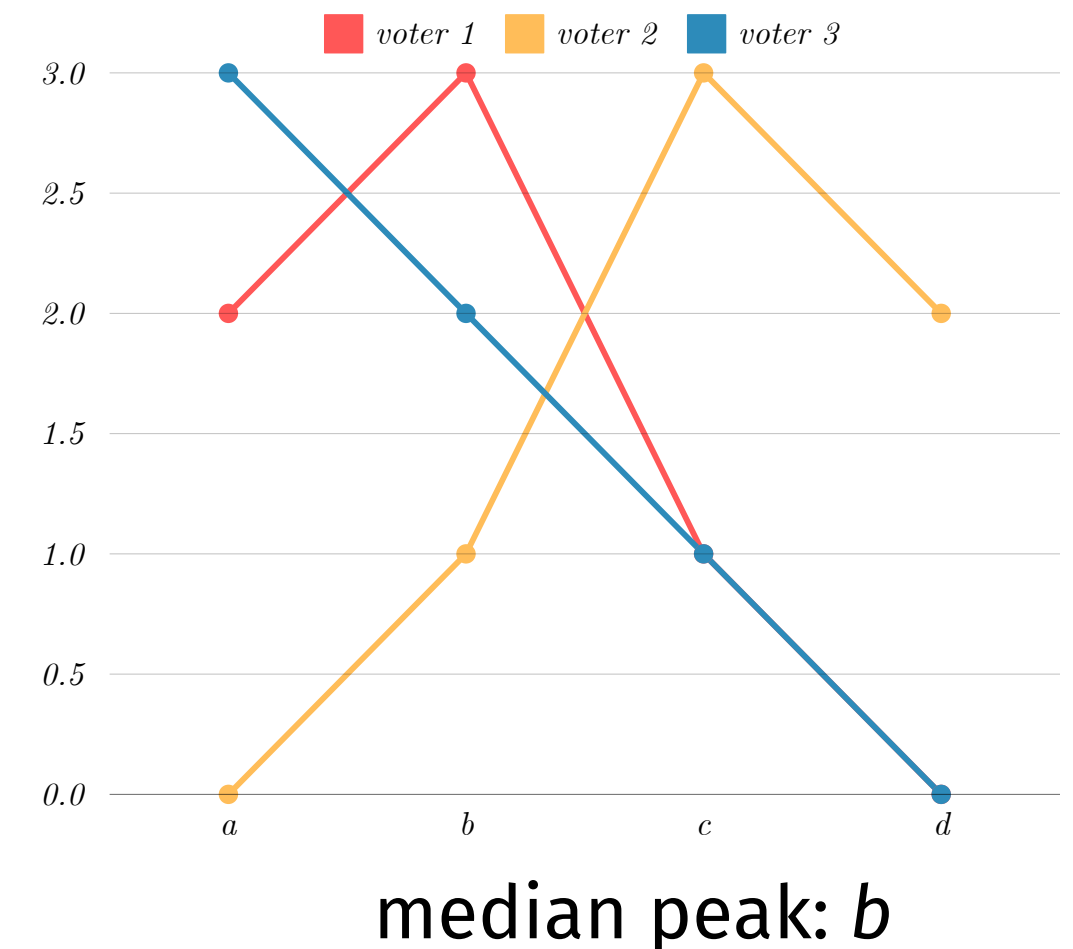

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

PROOF

If alternative x is the median peak, all voters whose peak is to the right of, and including, x rank x higher than alternatives to its left. And there is a strict majority of such voters.

Similarly, voters whose peak is the left of, and including, x rank x higher than alternatives to its left.

Thus, x beats every other alternative in a head-to-head contest, i.e., is a Condorcet winner.

MEDIAN VOTER THEOREM + EXTRA TOPPING

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then there is no incentive to vote tactically.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

MEDIAN VOTER THEOREM + EXTRA TOPPING

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then there is no incentive to vote tactically.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

PROOF

Note that the median voter has no incentive to report a different ranking.

MEDIAN VOTER THEOREM + EXTRA TOPPING

THEOREM (BLACK, 1948)

For an odd number of voters, if the profile is single-peaked then there is no incentive to vote tactically.

Black, D. (1948). On the Rationale of Group Decision-making. *Journal of Political Economy*, 56: 23-34.

PROOF

Note that the median voter has no incentive to report a different ranking.

And if any other voter changes the median peak (by reporting a different ranking), this can only lead to a worse winner (for them)!

Supposing alternatives can also change their positions in order to attract more followers, where does this take us?...
